**NOTE**

Education makes better minds and knowledge of the mind can make better education. The purpose of this chapter is to improve the methods by which we educate children. This means to modify the system of schools so that it is based on the understanding of children and the processes of a better education. Education is the passing on of the accumulated wisdom of the children to the students. This means that you must have the chance to pass this wisdom to your students. If you follow these principles, your students will learn. They will learn how much your students are truly to learn. They will learn how to teach. They will learn how to think for themselves. They will learn how to build a bridge. They will learn how to become teachers. They will learn how to educate others.
